

Improve AI model effectiveness and reduce data risk

Catalog, assess and monitor any AI use case

Organizations are under intense pressure to quickly leverage AI as a competitive advantage. However, using AI without proper governance and without a complete understanding of the underlying data can lead to unwanted outcomes including model bias, inaccuracies, legal and ethical implications, trust issues, and more. While these risks may seem like too much to take on, the risks of not implementing AI are far greater — loss of market share, squandering of competitive edge, inability to attract top talent and much more are all real possibilities.

Collibra AI Governance helps data, AI and legal teams collaborate to ensure compliance with legal and privacy policies, mitigate data risk, improve model performance and ROI, as well as accelerate time to production.

Benefits

More reliable AI

Catalog AI use cases with model cards, connecting AI use cases to underlying data, and continuously validating the reliability of that data

More compliant AI

Discover sensitive data classes and enforce data access policies for greater control of data and reduced legal and reputational damage

More traceable AI

Examine and explore the lineage of all AI inputs and outputs and build externally referenceable AI model cards to instill trust

Solution highlights

Catalog and manage AI use cases

Catalog AI use cases with out-of-the-box model cards, and continuously validate the reliability of that data

Connect AI use cases to underlying model development platforms and the data that feeds it

Integrate model metadata from Google Vertex and Databricks for a complete picture of AI use cases and outputs

Mitigate data risk

Drive more responsible AI by discovering sensitive data classes for greater control of data

Protect data with privacy by design

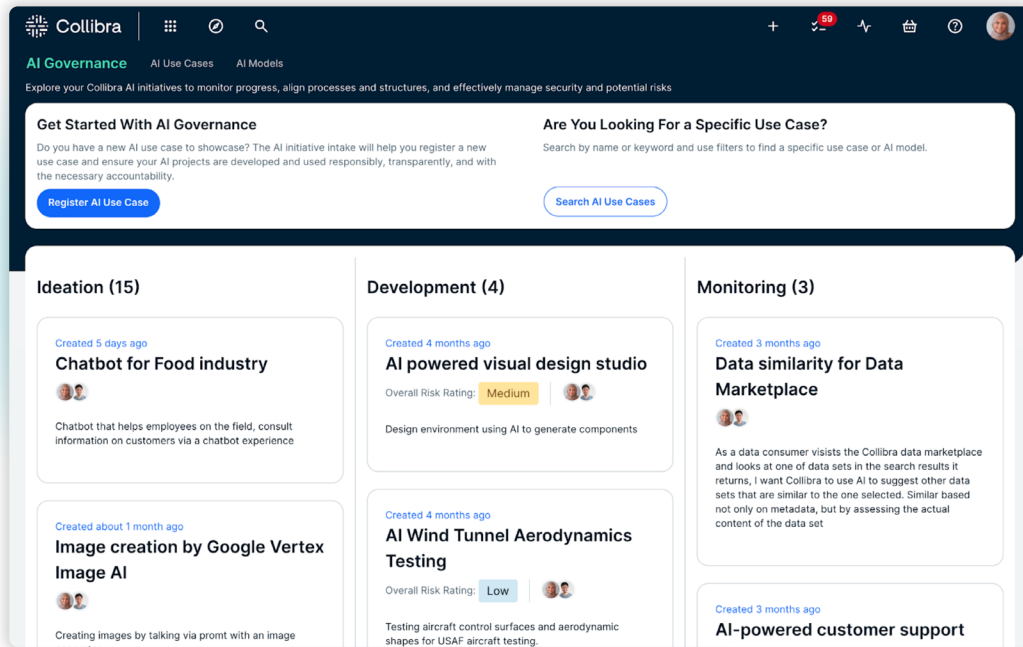

Build and enforce data privacy policies to ensure AI complies with internal usage rules and external regulations

Increase visibility into data provenance

Drive more compliant and valuable AI with visibility into the origins of the data that feeds it

Engage and collaborate across personas

Customize assessments and workflows across data, AI, legal/risk, and business users to adapt to your organization
