

Collibra + SAP Business Data Cloud

Deliver trusted data and AI

To help organizations simplify their data strategy, SAP and Collibra offer a unified architecture to manage, integrate and govern data across disparate sources, ensuring your organization operates with trusted data and powers trustworthy AI solutions. Collibra Platform and SAP Business Data Cloud integrate to help organizations leverage their SAP and non-SAP data so they can do more with what they have. Our unified approach provides a comprehensive solution that seamlessly integrates and governs data and AI, empowering organizations with the trusted data required to drive innovation and maintain a competitive edge.

To scale AI, leaders must evolve data management practices and capabilities to ensure AI-ready data... However, 57% of organizations estimate their data is not AI-ready.

Empower everyone to use data with ease

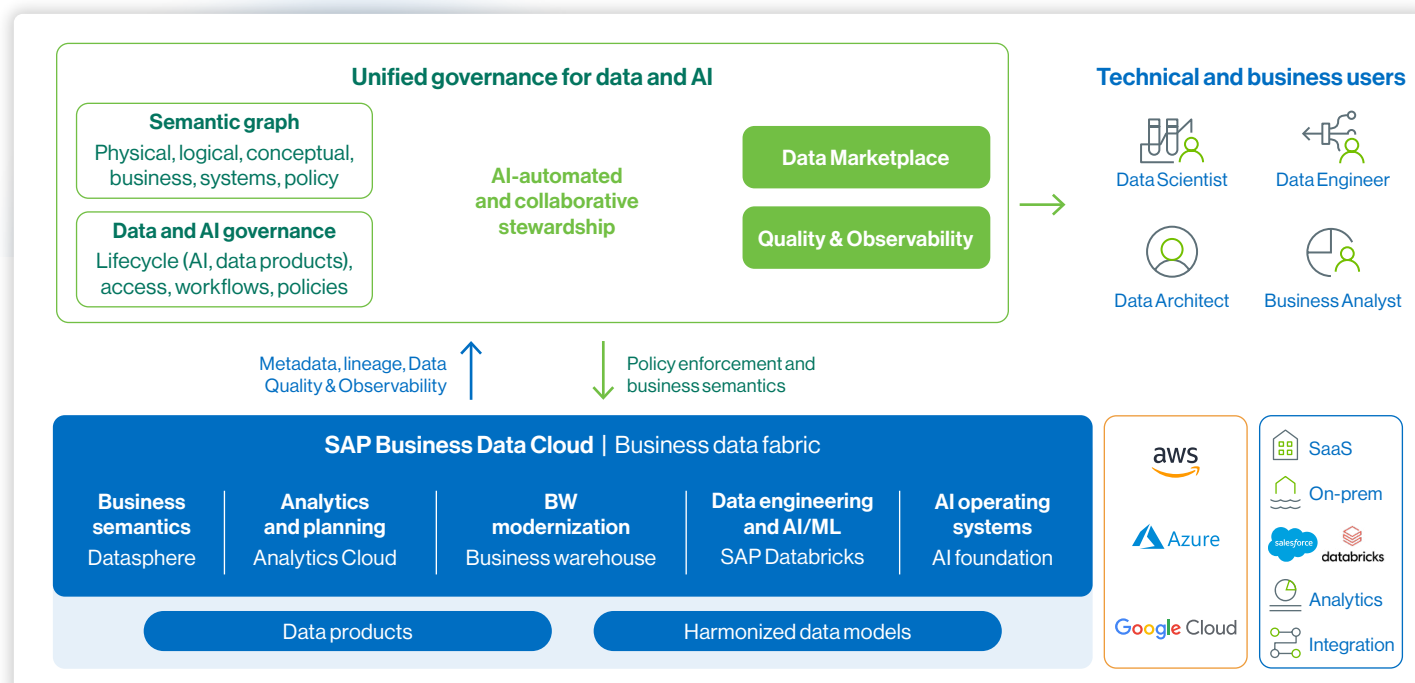

Integrating Collibra's business-friendly internal data marketplace, end-to-end governance and lineage with SAP Business Data Cloud streamlines data access and collaboration

Be confident about your data quality

AI-generated rules and pushdown processing for SAP and non-SAP sources increase efficiencies and reduce costs related to data quality and pipeline monitoring

Innovate with reliable, compliant AI

Connecting AI research teams with business, legal, privacy and security teams to assess, monitor and manage the data and AI lifecycle mitigates regulatory risks and supports business alignment

Collibra and SAP: A data-driven partnership

Establish a high-quality data foundation. Centralize and standardize data across the organization, enhancing data quality and consistency. Automate data checks and validations to ensure accurate, consistent and reliable business outcomes.

Streamline governance of your business data. Implement data governance across your entire data landscape, including SAP and non-SAP sources. Establish a consistent framework for data management, including compliance and reducing legal risks.

Deliver trusted AI. Deliver access to high-quality, well-governed data, ensuring trustworthy and transparent AI products. Enhance AI's value with unified governance of AI models and data assets across SAP and other AI platforms.

SAP: The backbone of a data-driven business

SAP applications are the backbone of your data ecosystem, providing the core business data needed to develop your analytics, data products and AI models. SAP Business Data Cloud enables organizations to connect and deliver data across various systems with business context and integrity intact. This simplifies an organization's complex data landscapes, providing data consumers with easy access to accurate, meaningful information.

Collibra: For trusted data and AI

An SAP® Endorsed app available in the [SAP Store](#), Collibra's unified platform brings flexible governance and continuous quality with automated visibility, control and traceability to the world's leading brands. Collibra unifies governance for data and AI for every user, every use case and across every source so that everyone in the organization can trust, comply and consume their data at scale.
