Use of generative AI for generating descriptions for diagrams

AI feature description	This feature leverages generative AI to suggest descriptions for diagrams within the Collibra platform.
Feature optional?	Yes
Model	Model Type: Google Vertex AI Gen AI?: Yes Owner: Google LLC
Intended use	This feature is intended to assist users in adding descriptions of diagrams within the Collibra platform.
Model training/ retraining data	Collibra relies on the training data leveraged by Google Vertex AI as shipped. For more information, please see the Google Vertex AI Product Documentation.
Model input	Input would include asset type information, relation type information and, depending on the view configuration, some information regarding assets like the asset name, some attributes, tags, statuses or responsibilities information.
Model output	Output is a description of nodes and edges on the diagram where nodes represent the assets and edges represent relations between those assets. The structured description allows for a clear understanding of the diagram's components and their interdependencies.
Is input data used to train the model for general product improvement purposes?	No
Data storage and retention	All Collibra storage locations are referenced here. Retention is concurrent with customer environment retention.
Human in the loop?	Yes. Usage of suggested data is within the user's discretion.
Is personal data processed?	Personal data is not intended to be included in the model input data, but if it is, its processing is subject to the customer's data privacy terms and conditions with Collibra under its Master Cloud Agreement. You can find our standard, customer facing privacy terms here.
Other considerations	None
