AI is widening the chasm between what companies need to do with data and what they realistically can do with it. Potential use cases for data have long outstripped most organizations' ability to support them all. Expensive cloud adoption initiatives haven't been the cure-all they promised. AI compounds the problems of data accessibility, safety and quality, and the organizations that jump in without a scalable and effective governance foundation will unleash chaos and risk. The organizations that build that foundation now will accelerate every data use case and achieve faster, better AI use cases. The work to prepare for AI has to start now.

Collibra empowers you to achieve a higher degree of compliance while giving your people more autonomy. It unifies data across every system and catalog, with a high degree of customization for how you govern data so you can achieve what you want, how you want. And it makes it easy for your technical and business users to collaborate on governing and stewarding data, for consistent and clear application of policies and context. Collibra gives you the power to scale data initiatives and accelerate new use cases—and a foundation for reaping first-mover benefits for new AI. That's Data Confidence™.

**Founded:** 2008

**CEO:** Felix Van de Maele

**Employees:** 1,100+

**Headquarters:** New York City and Brussels

**Funding:** \$596.5 million

**Valuation:** \$5.25 billion, the first Belgian company to reach unicorn status (2019)

Collibra Platform accelerates all your data and AI use cases with unified governance.

## Benefits

### Unified governance

Unified governance for data and AI across your entire data estate and organization.

### Active links

Active links between datasets and AI use cases, for end-to-end governance from input through output.

### Valuable context

Rich business context connected to technical metadata via our enterprise metadata graph, intuitive UX and workflows for bringing business users into data stewardship.

---

## Product highlights

### Collaborative

Bring together every user - from technical team members to business minded data leaders - in a single, collaboration hub.

### Community-fueled

Purpose-built platform influenced by our Data Citizens Community - the largest of its kind for today's data leaders, accessible to every customer to advance skills.

### Configurable

From colors and logos to how the platform functions, make it work for your team, not change the way your team works.

### Connected natively

Not from risky open source connectors or those managed by third parties but plugged in to the sources you need, built and managed by our team.

### Complete

From the original governance leaders, a fully extensible platform with every tool your team needs for today's use cases and those in the future.
