

# Data landscape optimization for improved total cost of ownership, flexibility and time to value

Unify governance with a comprehensive platform that reduces total cost of ownership, increases flexibility and accelerates time-to-value across all data sources, for every user, and for every data and AI use case.

Every organization is turning to AI to automate business processes and support better business decision-making. But as the demand for AI use cases, models and agents grows, data and AI environments are becoming ever more fragmented. Legacy tools that are rigid, siloed and costly aren't keeping up with these demands. Organizations face the burden of multiple disconnected platforms, driving up integration, implementation and maintenance costs. As a result of this complexity, organizations struggle to deliver on data and AI objectives due to poor time to value from major gaps in visibility, control and traceability.

Collibra unifies governance with a comprehensive platform that reduces total cost of ownership, boosts flexibility and speeds up time-to-value. Collibra's unified approach to data and AI governance can observe, track and protect data across all data sources, for every user, and for every data and AI use case. This unified approach eliminates the need for multiple disconnected tools, streamlining data and AI governance to both reduce total cost of ownership and accelerate time-to-value.

## Benefits

### Consolidate tools for better TCO

Simplify spend with One Collibra for Procurement and Finance—fewer tools and licenses, lower TCO, one contract to manage and one communication channel.

### Minimize setup and maintenance costs

Remove technical debt with only one platform to configure, update and support, instead of integrating and maintaining multiple separate tools.

### Reduce infrastructure and engineering work

Govern data where it resides, which means fewer systems, less DevOps work and lower cloud/storage costs.

### Faster time-to-value and more adoption

One clean UX for everyone - less training, quicker onboarding, faster time-to-full productivity for your teams, more adoption and more value

### Deliver more use cases, faster

No need to rebuild or re-buy every time you expand. Collibra platform supports new projects like data quality, AI governance, or data privacy

### Scale the value and increase ROI

One platform that grows with you - new teams can use it for their data governance use cases without needing new tools or extra integration work
