

Solution Architect Certification

Industry-recognized certification for experienced Collibra platform implementors

Collibra Solution Architects elevate an organization's ability to implement Collibra efficiently. They accomplish this by providing technical leadership while their organization designs, plans and implements Collibra. These facets of technical leadership require Solution Architects to have a broad understanding of Collibra's capabilities and how the organization can use them to support its business goals

Who should get certified?

The ideal candidates should have at least six months of experience with the Collibra platform and have experience configuring an operating model. Also, many candidates may use this certification as a stepping stone to becoming a certified Collibra Ranger. The skills they are looking to develop and prove include:

- Leading orientation and planning review sessions for networking, server platform, desktop services and security-related events
- Translating business, application, and end-user system requirements into technical requirements
- Leading development of the operating model development, including asset and meta-model
- Making recommendations as needed, applying creative, in-depth technical and theoretical knowledge
- Playing an active role in supporting continuous Data Intelligence improvement

What's involved?

Those interested in obtaining this certification are strongly encouraged to take hands-on training in preparation for the exam. This can be completed either through Virtual Labs or instructor-led training. However, if you already have the recommended Collibra platform knowledge, you can request to be enrolled directly in the exam. To enroll, simply email certification@collibra.com (Or Premium Education subscribers can take the exam instantly after completing their certification path).

The exam includes approximately 60 questions, which should be answered within 120 minutes. A minimum score of 80% is required to pass the exam. Turn the page to see a full list of what's on the exam, including the relevant courses and certification paths.

Collibra helps our customers do more with trusted data. Our Data Intelligence Platform brings flexible governance, continuous quality and built-in privacy to the world's leading brands. To learn more, visit collibra.com and follow us on [LinkedIn](#), [Twitter](#), [YouTube](#) and [Instagram](#).

Certification paths

If you decide to take hands-on training to prepare for a certification, you have two direct paths, or you can mix and match courses from each path, if that better meets your goals and learning style.

Path 1: Virtual labs

Virtual labs: Self-paced online courses that include hands-on exercises in a sandbox environment with Ask-the-Expert forums for inquiries and assistance. Included in Premium Education subscriptions.

Getting Started	Catalog	Operating Model
Workflow Engineering	Collibra APIs	Intermediate APIs

Path 2: Instructor-Led Training (private, public, or combination)

Private training: Virtual or onsite sessions scheduled for up to 15 members from your organization. One credit = 1 hr of private training. 54 total credits are required for the group to complete all private certification training.

Public training: Pre-scheduled sessions with participants from multiple organizations. One credit per person per event. 21 total credits are required per person to complete public certification training, or learners can register for unlimited public training sessions via Premium Education subscriptions.

Collibra basics	2 hrs	Creating an asset model	4 hrs	Managing workflows	2 hrs
Asset governance	2 hrs	Creating a metamodel	2 hrs	Designing workflows	2 hrs
Asset views and importing assets	2 hrs	Configuring an operating model	2 hrs	Creating workflows	4 hrs
Traceability diagrams	2 hrs	Data lifecycle	2 hrs	Script tasks	2 hrs
REST Core APIs	4 hrs	Operating model governance	2 hrs	Modifying workflows	4 hrs
REST Import APIs	4 hrs	Register Data	2 hrs	Guided stewardship	2 hrs
REST Search APIs	2 hrs	Lineage and data classification	2 hrs	Data shopping experience	2 hrs

Note: these course names also reflect the topics covered on the exam. The color coding identifies which courses align between the Virtual Labs and Instructor-Led Training, so you can mix and match as you see fit.
