Collibra Platform

Your unified system of governance for data and AI

AI is speeding everything up. But data challenges are holding companies back and fragmented governance makes it hard to even get the basics right. Systems don't talk to each other. Policies are inconsistent. Business users can't find or understand the data they need. The result—no one trusts the data.

Collibra is your solution. The Collibra Platform unifies governance across every system, user and use case so you can accelerate every data and AI initiative with trust and control. From business glossary and lineage to quality and privacy, our platform automates visibility, access and tracing from input through output.

The Collibra platform is how you transform fragmented governance into Data Confidence™.

Scale AI with confidence
Establish trust, transparency and control across the entire AI lifecycle with built-in traceability and policy automation.

Accelerate cloud migrations
Move high-value data to the cloud faster with unified controls that ensure data quality, compliance and adoption.

Enable governed, self-service analytics
Curate and deliver access to trusted data products through a secure, business-friendly marketplace.

Unlock reliable business insights
Find and certify reports, metrics and terms so everyone uses the same definitions ensuring consistency and confidence.

Protect sensitive data, proactively
Automatically discover, classify and monitor personal data to support evolving privacy regulations.

Meet regulatory requirements with confidence
Automate assessments, traceability and enforcement to ensure compliance is embedded from day one.

Fix data issues before they hit the business
Surface quality problems with AI-powered monitoring and prioritize fixes based on business impact.

Standardize meaning across the business
Establish and share consistent definitions for KPIs, terms and metrics with a federated business glossary.

Govern data and AI from a single platform
Unify governance across clouds, domains and personas to increase agility, reduce risk and accelerate outcomes.

Product highlights

AI Governance

Streamline the full AI lifecycle with collaborative model documentation, policy control and end-to-end traceability.

Data Catalog

Accelerate data discovery and access with 100+ native connectors, automated classification and an intuitive marketplace experience.

Data Governance

Establish a shared foundation across business and technical users with business glossaries, stewardship workflows and policy automation for trust and scale.

Data Lineage

Visualize how data flows across your ecosystem—business and technical—with AI-powered lineage and root cause analysis.

Data Quality & Observability

Find and fix issues before they hit the business using machine learning, adaptive rules and policy-driven monitoring.

Protect

Control access with no-code policy management, automated classification and enforcement across your multi-cloud environment.

Data Privacy

Centralize privacy controls, automate assessments and monitor compliance across evolving global regulations.

Data Notebook

Query, visualize and share data directly in Collibra to foster collaboration and create trusted insights across teams.
