Big Data Governance

Collibra

The key to unlocking value

Collibra Data Governance Center

Collibra Data Governance Center has the capabilities you need to make big data work for you.

Business Friendly AI Assisted Search

Find the data you need easily the first time. The data catalog is linked to business terms and machine learning technology recommends appropriate data.

Ingestion Control

Ensures that data and its lineage are known.
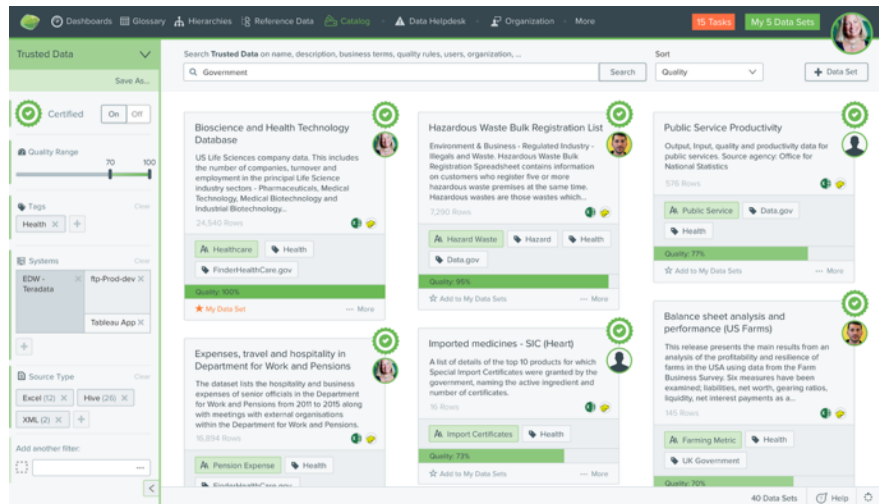

Govern Any Asset

Including analytical models, map/reduce jobs, queries, visualizations, reports, model components.

Advanced Visualization

Complete visualization of any type of relationship, including lineage relationships and context.

Maximize the Value of Big Data

Collibra Data Governance Center is an integrated platform that empowers data stewards, analysts, and any user to find and understand data, fix problems, and gain knowledge about your data. Collibra Data Governance Center's incredible flexibility, artificial intelligence assisted automation, and configurable operating model are tailored for the new big data world. Collibra Data Governance center delivers this value for your big data, and for all your data. Govern and manage your data through its complete lifecycle. Bring knowledge and insight to your users.

Speed

Organizations spend up to 75% of the elapsed time for creating analytics engaged in data wrangling activities. Using Collibra Data Governance center makes it simple to find the data you need. The Collibra Catalog knows all of your data, and ties it to business terms

that can vary across different parts of the organization. The patent pending machine learning technology creates meaningful recommendations based on your searches and interests. Data can be added quickly using simple ingestion controls, and errors and omissions dealt with at once using the advanced change management processes. Your data is ready when you need it.

Control

Data scientists, owners and users can insure that the correct data values, references and results are used. One of the biggest benefits of big data is the flexibility to use data in new and different ways. Sometimes this means changing or adding new attributes to the information you have. Add to your data, change it, change its metadata; all through simple collaborative processes the insure the right stakeholders are involved in every decision.

Flexibility

Collibra can handle any type of asset, attribute, relationship, policy or agreement. Want to track lineage from visualization through transactional sources? Want to identify which map/reduce jobs are used with which predictive models? Want to create a special data sharing agreement for your cloud based IT suppliers? All of this is straightforward, with the most widely used and flexible data governance system.

Integration

Collibra Data Governance Center is integrated with a wide variety of technologies and data. It can access technical metadata found in Hadoop environments, source metadata from databases and applications, information from data visualization tools, and practical links to email and work management systems. This comprehensive integration means that data governance is automated, and can scale with your big data environment, but still manage individual detail.
