

# Collibra Governance

## Organize and understand data in your enterprise

Modern organizations require trustworthy data that is easy to find and easy to use in order to make sound business decisions. It is essential for businesses to harness their data to remain competitive and identify new opportunities, but this is becoming increasingly difficult as the amount of data proliferates and the data landscape evolves. Business users often have trouble knowing where to find the right data and even when they do find it, they don't know how to use it or if they can truly trust it. If organizations are going to use data to improve business outcomes, everybody in the organization must be able to easily consume it.

Collibra Governance helps organizations accelerate their digital transformation by ensuring that all Data Citizens understand and can find meaning in their data. Organizations get up and running quickly with pre-built templates that rely on industry best practices and provide a framework for cross-functional collaboration. Through automating many governance and stewardship tasks, Collibra Governance enables businesses to establish a true governance foundation and trust their data while they grow.

**“The beautiful thing about Collibra is that it’s not intimidating to a business user. It’s designed with them in mind.”**

**Peggy McCoy**  
Chief Data Steward, NetApp

### Benefits

#### Establish a common understanding

Create a shared language around your data assets to ensure consistency across the organization

#### Keep pace with change

Automate governance and stewardship tasks so governance practices stay up to date as your business evolves

#### Collaborate with Data Citizens

Interact within common workflows and processes to facilitate a collaborative approach to governance

#### Centralize information

Document data assets in a centralized location for visibility and to enable collaboration among the organization

## Product Highlights

### Business Glossary

Define terminology, rules and regulations so everyone operates on the same foundation

### Stewardship

Collaborate on information assets across departments with role-based dashboards and interactive views

### Data Dictionary

Document your metadata and its use, origin, format and relationship to other data

### Reference Data

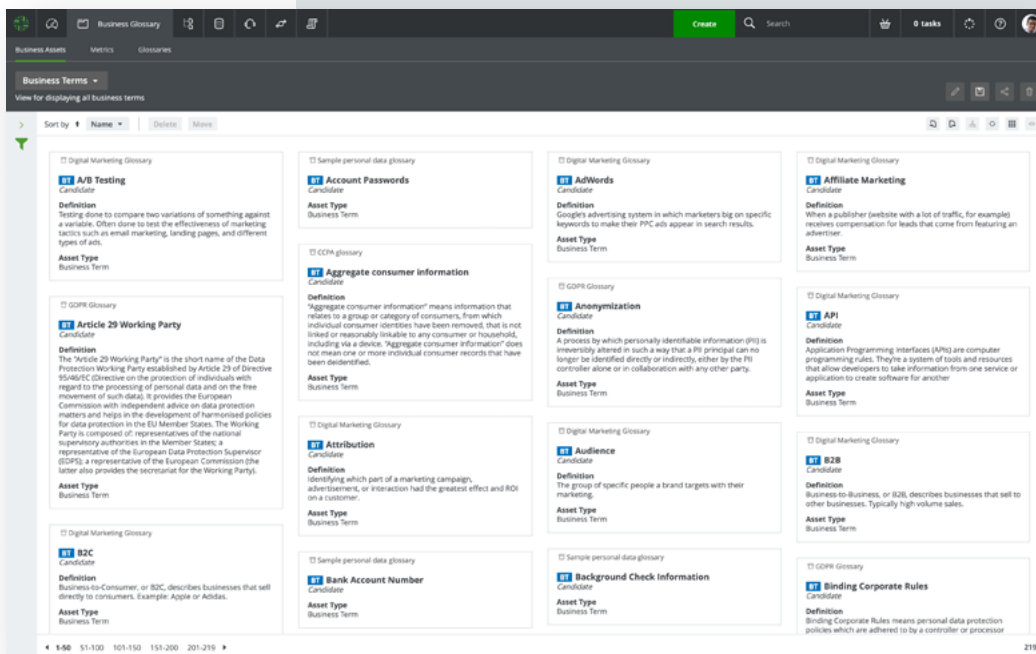

Reconcile data across operational systems for accurate reporting and analyses

### Data Helpdesk

Allow any user to submit a Help Desk ticket to report incorrect data to restore trust in data

### Policy Manager

Create, review and update data policies so that they are adopted and applied throughout your organization
