COLLIBRA POLICY MANAGER

Implement the right data policies

Implementing the right data policies across your organization in a rapidly changing regulatory environment isn't easy, but today it's more important than ever. Still, many organizations are discovering that their data policies aren't used broadly or deeply across the enterprise. Even the best policies will fail to make an impact if their rules are not easily discoverable by data users or if they are not rigorously and logically enforced.

Collibra Policy Manager helps data citizens and other information professionals understand the policies, rules, and enforcement capabilities governing their data. Automated workflows help data users create, review, and update data policies so that they are adopted and enforced across your organization. With transparent, easily-accessible policy management tools, you can make trusted data policies a vital part of your organizational culture.

Enforce data policy every day

Collibra Policy Manager makes it simple for you to codify, implement, and enforce your data policies by capturing all of the information about those policies in one place and making them visible across the organization.

Engage with data stakeholders to make critical policy decisions

Collibra Policy Manager's collaboration, workflow, and policy review tools make it simple to evaluate, update, and add policies. Workflow automation helps streamline the deployment of policies with tools that help you develop policies, apply rules to them, and configure enforcement processes.

Give data users the confidence in their data

Collibra Policy Manager captures all the information about policies, their associated business rules, and the processes that enforce them. Data users can easily understand not only what rules exist, but why and how to follow them.

Collibra Policy Manager helps data citizens understand data policies and how they are enforced. It enables you to implement the right data policies across your organization in a rapidly changing regulatory environment and makes the logic of those policies visible to every data user for better compliance.
