COLLIBRA DATA GOVERNANCE CENTER

Give your data citizens the confidence they need to be truly data driven. Only Collibra Data Governance Center delivers comprehensive functionality, robust integration, and unmatched ease of use in a single, collaborative platform.

Data driven organizations require trustworthy data that is easy to find and easy to use. But handing data issues, exploring data lineage, managing policy change and compliance, and improving data quality demand time and attention of data stewards throughout the organization.

Collibra Data Governance Center provides an automated data governance platform designed with the end users – the data citizens - in mind. With Collibra Data Governance Center, every data citizen can find, use, and understand their data. Organizations gain the configurability and flexibility needed to manage the data organization. Simple, collaborative, and automated data governance and stewardship can be deployed as needed throughout the organization.

Comprehensive Functionality

Collibra Data Governance Center delivers the broadest range of capabilities to manage all of your data governance and data stewardship use cases. And it is simple enough that every data citizen can find the data they need, evaluate its quality, and use it effectively in their role. Its highly configurable operating model means that Collibra Data Governance center can grow and scale with your organization. And only Collibra delivers proven, out-of-the-box best practice models get you up and running quickly and easily, and installable configurations for specific industries, regulations, and configurations.

Big Data, Analytics, and Business Intelligence

Expectations around big data are hard to satisfy and building a big data environment that enables self-service analytics, operational reporting and data science is a tall order. Collibra Data Governance Center unlocks the power of the data for all of your data citizens. With Collibra Data Governance Center, you can provision data, analytics, and reports throughout the organization. Collibra Data Governance Center delivers stewardship and workflow capabilities that enable you to control ingestion of data, govern analytical models and their components, certify reports and authoritative data sets, and manage data issues.

Business Glossary and Data Catalog

- Understand business terms, data sources, and their attributes and relationships
- Give users easy access to all the information about your data
- Navigate lineage and relationships in interactive diagrams for complete traceability
- Create context-driven meaning with semantic models that vary by domain and function

Data Stewardship Manager

- Create your organization with roles, responsibilities, and processes
- Define and manage your data policies and business rules from a business perspective
- Monitor the execution of those policies as well as your entire data governance operation
- Implement new processes and policies quickly and easily with configurable workflow

Reference Data and Hierarchy

- Define common codes and abbreviations
- Create crosswalks and hierarchies
- Enable the integration of data from disparate sources

Data Quality

The Collibra Data Governance Center workflow-driven business rule approval and issue resolution processes improve data quality and expose maturity metrics. Simple dashboards enable data citizens to see and respond to data quality issues, and to know whether their data is good enough for their needs. Visible improvements in both the quality of data, and the processes for managing that quality, create trust in the data.

Master Data Management

Collibra Data Governance Center empowers data stewards to govern master and reference data with workflows that are triggered as needed. Stakeholders can collaborate to resolve issues and connect reference data across the entire information landscape.

Regulatory Compliance

Today's regulatory environment demands data governance, stewardship, and lineage. Collibra Data Governance Center combines proven, out-of-the-box configurations with a flexible system that can easily be tailored for your application and data portfolio. Collibra Data Governance Center is used across industries to address regulatory requirements including GDPR, BCBS 239, and many others.
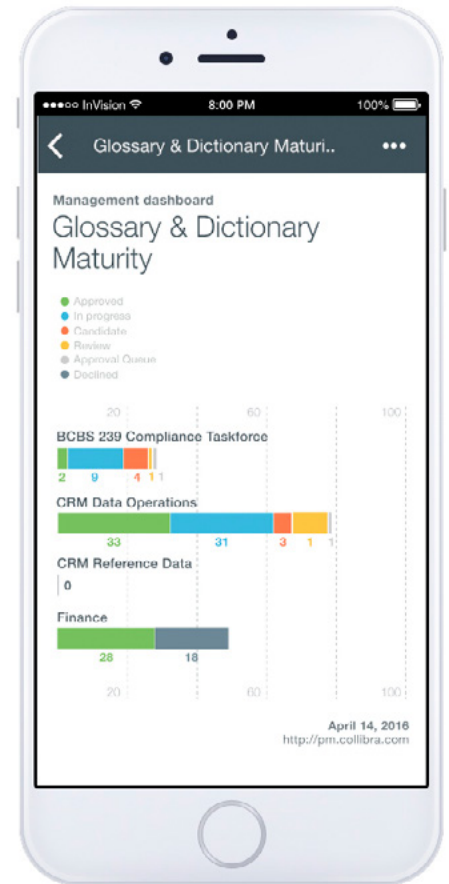

Robust Integration and Technology

Collibra Data Governance Center was built to deliver accurate, trustworthy, accessible data for data citizens across the entire enterprise. The core platform is available in the cloud or on premises. Collibra Connect delivers active integration between the platform and sources of metadata and business rules. Its event-driven architecture, flexible templates, and library of connectors simplifies the connections to all your applications, tools, and programs that manipulate data. Collibra Connect creates complete automation, without customization.

Improve Data Value and Limit Cost and Risk

Collibra Data Governance Center delivers governance capabilities for the entire organization. Data citizens benefit from unmatched ease of use through desktop and mobile applications and integration. Automation and collaboration free data stewards from the complexity of spreadsheets and email, and the tedium of meetings. Chief Data Officers gain visibility and control of the data processes, and can measure their effectiveness and outcomes. Collibra Data Governance Center empowers every data citizen to use data to drive business performance.

Hundreds of organizations worldwide have chosen Collibra Data Governance Center as their platform for becoming truly data driven. To learn more, visit collibra.com.
