## MODULE

## LEARNING OBJECTIVES

## OUTCOMES

## ± HOURS

### Setting the Stage

This module is intended for everybody involved in your company and Collibra to introduce each other. It gives an overview of DGC **approach** and **tool** suite, and sets the **key outcomes** for the starting phase of your business glossary.

- ✓ Identified team members and roles
- ✓ Identified data governance case and key objectives
- ✓ Data governance project plan and milestones

### Kicking the Tires

This module includes three exercises in which trainees are instructed to use the tool functionality for all three phases of a **business glossary lifecycle** - i.e., entry, approval, provisioning - without upfront introduction to the underlying ideas and theory.

- ✓ Basic comfort level of the team with the DGC suite
- ✓ Sample workflows have been explored

### Setup your DG Organization

This module gives an overview of **approaches** and **best practices** to organize data governance in terms of **communities, domains, and roles**. We setup your DG organization in the software.

- ✓ Communities, domains and roles
- ✓ Content scoped and available for entry

### Under the hood

This module is intended to comprehend and customize the **DGC Operating Model** that drives and establishes your data governance.

- ✓ Understanding of DGC Operating Model
- ✓ Customized DGC Operating Model for the starting phase

### Business Glossary

For more details, see modules (5) **entry**, (6) **approval** and (7) **provision** of business/data assets in a separate datasheet for **Business Semantics Glossary**.

### Reference Data

For more details, see modules (5) **entry**, (6) **approval** and (7) **provision** of reference data in a separate datasheet for **Reference Data Accelerator**.

### Data Stewardship

For more details, see modules (5) **policies and rules**, (6) **issue management** and (7) **data quality reporting** in a separate datasheet for **Data Steward Manager**.

### Workflow Engineering

This module explores the need to **customize** the out-of-the-box workflows in DGC, and involves for those cases a requirement **analysis** and **design** of new workflows for the entry, approval and automated provisioning of business and data assets.

- ✓ Workflow requirements are turned into workflow designs
- ✓ Workflows deployed and tested in the DGC suite

### Administration & Customization

This module covers all functions required for the **administration** of the tool. We explore **customizations** of the Operating Model. Finally, we have a **Q/A** to make sure all remaining challenges have been addressed.

- ✓ Configured roles and status types
- ✓ Configured asset completion score calculators
- ✓ All remaining questions have been answered
- ✓ Introduction to Collibra support and roadmap
