

Collibra is driven by customer success. By focussing on Data Governance projects, together with our customers and partners, our organization has gathered valuable best practices and expertise on what makes Data Governance projects successful. As a result we have designed a set of very targeted service offerings which will support your organization in every phase of the lifecycle of your Data Governance lifecycle.

Besides the Quick Start, which is very much focussed on automating your operational model through the Data Governance Center, we have a number of service offerings which focus either on people or data assets. Because this is as much about managing people and how they interact with each other as it is about the data assets which they need to control and govern. In the end its all about focussing on those data assets which really matter in order to bring maximum value to the organization.

Launch

Strategic Workshop

Data Governance & Stewardship should be business as usual, which requires executive involvement, ideally from a cross-functional perspective. Help sell the initiative and the value to senior stakeholders with an industry-specific workshop.

1 - 2 days

Data Governance & Data Stewardship Fundamentals

Ramp up the expertise of your core Data Governance team, including the production of your first operating model.

2 days

Quick Start

Facilitate installation, configuration, coaching and knowledge transfer around Collibra's Data Governance Center. The quick start is the fastest and most efficient way to deployment and self-sufficiency.

10 days

Accelerate & Sustain

Data Steward Training & Certification

Data stewards are fundamental in any successful data governance program, and they are always strapped for time. This hands-on one-day class brings data stewards up to speed in the fastest way possible turning them into efficient contributors to data maturity.

1 day

Mentoring

You will always encounter unforeseen obstacles in the roll out of your initiative. Get a head start by targeted onsite or remote mentoring sessions.

2 to 3 months

Health Check

Schedule a health check of your Data Governance & Stewardship initiative to assess the current state, the most critical issues and a roadmap to move to the next level.
