Collibra Connect

Collibra Connect and Collibra Data Governance Center create the kind of data governance that your organization demands. Data is trusted and used knowing that policies have been followed, issues resolved and reference data managed responsibly. Your data and governance are linked. This is Active Data Governance with Collibra.

Collibra Connect delivers Active Data Governance by connecting your data, metadata, reference data, policies and definitions.

It synchronizes this information and instantly enforces policies across a complex portfolio of production systems.

Active Data Governance ensures compliance and improves lineage tracking, impact analysis, reference data consistency, data quality management and MDM.

Collibra Connect uses an industry standard integration platform with pre-built templates that gets you up and running quickly. Organizations can actively connect data governance to all their systems, eliminating manual work.

Big data, mergers and acquisitions, advanced analytics, social media – your information landscape changes every day, and Active Data Governance ensures that your data is up to date, consistent and compliant across the entire landscape.

■ **Automate Compliance**
Collibra Connect provides the API access and information transfer to instantly evaluate changes and ensure complete and verifiable compliance. No manual steps, errors or delays. Your data is trustworthy all the time.

■ **Integrate to business systems and data**
Collibra Connect comes with out-of-the-box templates for integration with big data, data management, reporting, and data quality tools, which can be adapted and deployed quickly. In addition, it has powerful connectors to access many other types of systems, including ERP, Finance, HR, Sales, Supply Chain and Analytics. Collibra Connect actively links the information assets from these systems that are needed for data governance.

■ **Provision changes instantly**
Once Collibra Connect is linked to these systems, any changes to policies as the result of issue resolution or modifications to information such as reference data can be applied instantly across the entire connected landscape.

■ **Reduce time to trustworthy data**
The combination of prebuilt integration templates, solid application integration technology and automation allows organizations to quickly and efficiently implement active data governance, and to evolve the scope of data governance over time as their needs change. Organizations that use Collibra Connect get more value more quickly from their data governance investments.

Active Data Governance

Your business demands a flexible data governance solution where policies are applied continuously and users know that they can trust the data in their systems.

Achieving active data governance requires a live connection between governance and stewardship artifacts — data definitions, business rules, reference data, policies — and various data consumers and producers. Collibra Data Governance Center and Collibra Connect establish this connection.

Collibra Connect actively monitors systems and ensures compliance with policies and standards.

Benefits

- Integrate data governance information with ease
- Enforce policies
- Speed up resolution of data issues
- Extend impact analysis capabilities
- Accelerate master data management (MDM) initiatives
- Enable end-to-end automation of all data governance activities

Collibra Connect

TEMPLATES

Collibra Connect comes with a catalog of integration templates for common Data Governance and Stewardship use cases.

Data Analytics **Data Quality** **Business Semantics** **Big Data** **MDM**

Integration templates allow organizations to implement common integration scenarios based on various systems and products. This drastically reduces the time it takes to achieve Active Data Governance. Advanced and easy-to-use tools allow organizations to extend integration scenarios with their specific requirements.
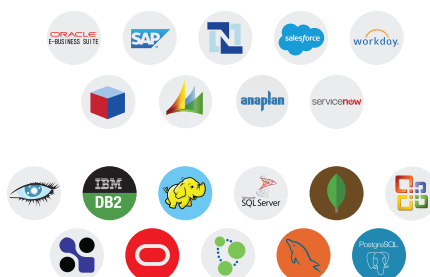

Templates are developed by Collibra and its partners, as well as contributed by the Collibra user community. Current templates include

IBM InfoSphere Business Glossary
IBM InfoSphere Information Governance Catalog
Informatica Data Quality

Informatica Metadata Manager
Cloudera Navigator
Trillium Data Quality

CONNECTORS

Collibra Connect leverages the AnyPoint connectors which provide out of the box interactions with hundreds of applications and APIs, and delivers additional connectors to sources of metadata and data quality information.

Applications
Oracle, SAP, NetSuite, Salesforce.com, Workday, SugarCRM, Microsoft, Anaplan, ServiceNow and more.

Data sources
Cassandra, DB2, Hadoop, SQL Server, MongoDB, SharePoint, Documentum, Oracle, Neo4j, MySQL, PostgreSQL and more.

TECHNOLOGY

Collibra Connect uses the latest in modern API-based integration technology. Its proven architecture delivers rapid integrations that can easily be customized, changed, and updated. Connectors are available to many different types of systems and data, including legacy sources.

DESIGN STUDIO	CORE ENGINE ENTERPRISE INTEGRATION		ENTERPRISE CONSOLE
Graphical Flows	Flow Orchestration	Error Management	Business Event Analyzer
Data Mapper	Mediation CEP	Transformation	Performance Management
